```
The present sequence is human protein with hydrophobic domain, HP10784.

The polynucleotide and polypeptide of the invention may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The polynucleotides may be used to produce the polypeptide, by inserting the nucleic acids into a host cell and culturing the cell to express the protein. The polynucleotides and cits complementary sequences may also be used as Sasays and also used in gene therapy. The polypeptides may also be used as antigens in the production of antibodies and in assays to identify modulators of polypeptide expression and activity. The polypeptides and nucleic acids may be used as nutritional supplements, to modulate conclude a could be used as antigens in the production activity, to modulate immune stimulation or suppression (e.g. for the treatment of microbial infections and autoimmune disorders such as multiple sclerosis, rheumatoid arthritis and tissue growth activity (e.g. for the treatment of Parkinson's disease, thuntingron's disease and Albaheme's disease, to modulate activity and chemokinetic activity, to modulate haemostatic and chemokinetic activity, to modulate haemostatic and chemokinetic activity, to modulate haemostatic and thrombolytic activity, to modulate haemostatic and chemokinetic activity, to modulate haemostatic and chemokinetic activity, to modulate haemostatic and chemokinetic activity, to modulate haemostatic and inflammation and to inhibit tumour growth
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human proteins with hydrophobic domains and the nucleic acids encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WMLLGGRLLTGLACGVASLVAPVYISEIAYPAVRGLLGSCVQLMVVVGILLAYLAGWVLE

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ä
                                                                                                                                                                                                                                                                                                                                                                                                         protein with cancer suppressing function. The invention also comprises a method for preparing the polypeptide by recombination, and an application of the polypeptide in treating diseases such as cancer, etc. Also disclosed in an antagonist of the polypeptide and its medical action. The present sequence represents a cancer suppressing protein of the invention

The GLUTX proteins are related to the facultative gluciose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention and treatment of hexose transport disorders such as isothemia, diabbetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is rat GLUTX3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             238

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66932-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUTI-GLUTS and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention and treatment of hexose transport disorders such as ischaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism disorder and/or a neurodegenerative disease. The present sequence is a consensus sequence

                                                                                                                                                                                                                                                                                                                                                                           à
                                     The present invention relates to GLUTX proteins (AAF55865-AAF55871 and AAB66322-AAB66941). The GLUTX proteins are related to the facultative glucose carriers GLUT1-GLUT5 and have hexose binding and/or transport function. The GLUTX proteins may be used in the diagnosis, prevention and treatment of hexose transport discorders such as isohaemia, diabetes, hyperglycaemia, hypoglycaemia, a glucose metabolism discorder and/or a neurodegenerative disease. The present sequence is human GLUTX3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  LAYLAGWVLEWRWLAVLGCVPPSLMLLLMCFMPETPRFLLTQHRRQEAMAALRFLWGSEQ 230

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        170
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             230
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     302
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    452
                                                                                                                                                                                                                                                                                                                                                                                                                                                             clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5' and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length not form part of the invention. Note: The sequence data for this patent did format directly from EPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     122

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a novel method for determining if a nucleic acid is a marker for a predetermined phenotype/cell type of interest from a biological species. The method comprises performing a global comparison of a group of expressed sequence tags (ESTS) known to be expressed in the comparison of a group of interest with all ESTS expressed in the comparison of in order to identify ESTS that are preferentially expressed in the phenotype/cell type of interest of the invention is useful for determining whether a nucleic acid is a marker for a predetermined phenotype or cell type of interest from a biological species, preferably arabidopsis or human. The cell type of interest is an abnormal cell such as a tumour cell, and the predetermined phenotype is a stress-induced phenotype such as hyperosmotic stress or high salt conditions. A method of the invention is also useful for detecrining the progression of colon cancer in a human, for detecting a tumour cell, and for regulating or preventing the growth of a tumour cell. An antibody of the invention is useful for detecting a tumour cell, and for regulating or tumour-associated markers. A polypeptide of the invention is useful as an immunogen for vaccinating an animal. The present sequence represents a concert in a number of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         EPLIGAEGPDYDTFPEKPPPSPGDRARVGTLQNKRVFLATFAAVLGNFSFGYALVYTSPV 62

The present sequence is that of human solute carrier type 2A (SLC2A) polypeptide 89237334. In the present invention, genetic screens were designed to identify modifiers of the p53 pathway in Drosophila in which p53 was overexpressed. Human orthologues (polynucleotides and polypeptides) of one such modifier were then identified, including the present polypeptide SLC2As are glucose transporter proteins with sugar transporter domains. They are attractive drug targets for the treatment of pathologies associated with a defective p53 signalling pathway, such as cancer. The invention provides in vitro and in vivo methods of assessing SLC2A function. Modulation of an SLC2A or its binding partners is useful for understanding the association of the p53 pathway and its members in normal and disease conditions and for developing diagnostic and therapeutic modaltries of p53-related pathologies. SLC2A-modulating agents that act by inhibiting or enhancing SLC2A expression, directly or indirectly, e.g. by affecting an SLC2A function such as transport or indirectly, e.g. by affecting an SLC2A function such as transport or binding activity, can be identified using methods provided. Modulators include small molecules, nucleic acids, antibodies, antisense oligonucleotides and phosphothioate morpholino oligomers (claimed)
                                                                                                                                                                                                                                                                                                                                                                                                         Identifying candidate p53 pathway modulating agent as therapeutic target for disorders of defective p53 function e.g. cancer, by assaying purified solute carrier family 2 (SLC2A) polypeptide or nucleic acid with a test
                                                                                                                                                                                                                                                                                                                    Funke RP;

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                         SUBCELULIAR LOCATION: Integral membrane protein. Principally intracellular. May move between intracellular vesicles and the plasma membrane. The dileucine internalization motif is critical for intracellular sequestration.

TISSUE SPECIFICITY: Highly expressed in adult and pubertal testis, but not prepubertal testis. Moderate expression in hypothalamus, but not prepubertal tistis. Moderate expression in hypothalamus, amounts present in most other tissues.

SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY. GLUCOSE TRANSPORTERS SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              SUBCELLULAR LOCATION: Integral membrane protein. Principally intracellular westcles and the plasma membrane. The dileucine internalization motif is critical for intracellular sequestration (By similarity). Insulin induces
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              insertion in the plasma membrane.

TISSUE SPECIFICTTY: Highest level of expression in placenta and restis. Highly expressed in adult and pubertal testis, but not prepubertal testis. Lower levels of expression in brain, liver, heart, kidney, fat and skeletal muscle.

BEWILOPMENTAL STAGE: High expression in blastocysts.

INDUCTION: Inhibited under glucose deprivation.

SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY. GLUCOSE TRANSPORTERS SUBFAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      STRAIN=129; TISSUE=Embryonic carcinoma;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  fructose (By similarity).
SUBCELLULAR LOCATION: Integral membrane protein. Principally intracellular. May move between intracellular vesicles and the plasma membrane. The dileucine internalization motif is critical for intracellular sequestration (By similarity).
SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY. GLUCOSE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            "Glucose transporter expression is developmentally regulated in in vitro derived bovine preimplantation embryos.";
Mol. Reprod. Dev. 60:370-376(2001).
-!- FUNCTION: Insulin-regulated facilitative glucose transporter.
Binds cytochalasin B in a glucose-inhibitable manner. Seems to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gandolfi
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bos taurus (Bovine).

Roberstion and initial analysis of more than 15,000 full-length

Human and mouse Colls.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (By similarity).
TISSUE SPECIFICITY: Highly expressed in brain, spleen and peripheral blood leukocytes.
SIMILARITY: BELONGS TO THE SUGAR TRANSPORTER FAMILY. GLUCOSE TRANSPORTERS SUBFAMILY.
TRANSPORTERS SUBFAMILY.
CAUTION: Has been described as GLUT9 in litterature, but this gene name has already been used for SLC2A9.

-!- SUBCELLULAR LOCATION: Integral membrane protein (Probable).
-!- SIMILARITY: Belongs to the sugar transporter family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          MEDLINE=99303315; PubMed=10376822;

Mol. Biol. 171:369-381(1983).
-!- FUNCTION: Uptake of arabinose across the boundary membrane with the concomitant export of a proton (symport system).
-! The concomitant export of a proton (symport system).
-!- SUBCELLULAR LOCATION: Integral membrane protein. Inner membrane.
-!- SIMILARITY: Belongs to the sugar transporter family.
                                                                                                                                                                                                                                                                                                                                                                                                                                    STRAIN=K12 / MG1655;

"Extransive mosaic structure revealed by the complete genome sequence
of uropathogenic Escherichia coli.";
Proc. Natl. Acad. Sci. US.A. 99:17020-17024(2002).
-!- FUNCTION: UPTAKE OF GALACTOSE ACROSS THE BOUNDARY MEMBRANE WITH
THE CONCOMITANT EXPORT OF A PROTON (SYMPORT SYSTEM).
-!- SUBCELLULAR LOCATION: Integral membrane protein. Inner membrane.
-!- SIMILARITY: Belongs to the sugar transporter family.

                                                                                                                                                                       Currie M.J., Bassett N.S., Gluckman P.D.,
"Ovine glucose transporter-1 and -3: cDNA partial sequences and
developmental gene expression in the placenta.";
Placenta 18:393-401(1997)
-:- FUNCTION: Facilitative glucose transporter. Probably a neuronal
glucose transporter.
-:- SUBCELLULAR LOCATION: Integral membrane protein.
-:- TISSUB SPECIFICITY: Highly expressed in brain.
-:- SIMILARITY: Belongs to the sugar transporter family. Glucose
  'Isolation of cDNAs and tissue specific expression of ovine glucose
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      65 ;

-: FUNCTION: Facilitative glucose transporter. Probably a neuronal
                                                                                                                                                                                                                                                                                                                                                                                   007647; Q62729;
01-0CT-1994 (Rel. 30, Created)
01-0CT-1994 (Rel. 30, Last sequence update)
28-FEB-2003 (Rel. 41, Last annotation update)
solute carrier family 2, facilitated glucose transporter, member 3
(Glucose transporter type 3, brain).
SLC2A3 OR GLUT3 OR GLUT-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           glucose transporter.
SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Highly expressed in brain.
SIMILARITY: Belongs to the sugar transporter family. Glucose transporter subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      "Neuron-specific glucose transporter (NGGT): CNS distribution of GLUT3 rat glucose transporter (RGT3) in rat central neurons.", FEBS Lett. 334:289-295(1993).

Biochemistry 37:1322-1326(1998).
-!- FUNCTION: Facilitative glucose transporter. Probably a neuronal
                                   glucose transporter.
SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: Highly expressed in brain.
SIMILARITY: Belongs to the sugar transporter family. Glucose transporter subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (POTENTIAL)
